Website V2 – Process

How to use this doc: Start here for status and next steps. Notes from each meeting are in the Meeting Notes tab. Page content lives in the Landing page & shared, Students and Professionals tabs.

Phases

- [ ] **Draft:** Design direction, logo ← we are here
- [ ] **Layout:** interface examples, section structure per page ← we are here
- [ ] **Content:** texts, links and documents per page
- [ ] **Build:** on GitHub
- [ ] **Review:** share draft, one feedback round with a deadline
- [ ] **Launch:** new domain live, redirects working, links updated
- [ ] **Maintenance:** owners for keeping each page up to date

Next steps

Task	Who	Status
Ask TUM what we need to mention on the site	Begüm	Completed
Find out what we need for privacy policy and Impressum	Mel	Not started
Collect interface examples for the student page	Students	Not started
Decide on design direction	All	In progress
Content	Diego, Begüm	In progress
First draft	All	Not started
Share draft for feedback (feedback deadline: Oct 15)	All	Not started
Set up redirects from safeaimunich.org	Mel	Not started

Logo All In progress

Links and access

No passwords in this doc, only who has access.

Where	What	Who has access
GitHub	Code	Mel

Colors

Logo:
Current logo is okay, but the Monk might invoke some cultish connotations

Landing page structure

Nav bar

- Logo (Munich AI Safety)
- Students
- Professionals
- Resources
- Join us (button → WhatsApp)

Hero

- Headline, e.g. keep "Making AI go well, together in Munich"
- One-line subline on who you are
- Primary CTA: Join our WhatsApp group
- Secondary links: "I'm a student" and "Not a student?"

What we do

- Short intro paragraph on the community
- Card: Students. Reading group, student events, onboarding. Links to /students.
- Card: Professionals and everyone else. Meetups, talks, coworking. Links to /professionals.
- One line for in-between cases: "PhD student or university staff? You're welcome in both."

Why AI safety

- The four points from the current site: capabilities outpacing understanding, high stakes, a tractable and growing field, Munich can contribute

Resources teaser

- Two sentences plus a link to /resources

Join the community

- WhatsApp CTA
- Email address

Footer (shared)

- Logo and one-liner
- Links: Students, Professionals, Resources
- Contact email and socials
- Impressum, Privacy policy
- © 2026 Munich AI Safety

MAISSI Website

Content

- Who we are and what we do

- Branches: use outreach links for each
    - Content

Possible layouts for displaying the branches

- Side by side blocks, brief description, and expandable
- One row after the other, expandable
- One block after the other
  XLab – Existential Risk Laboratory | University of Chicago

- Luma calendar

- Links to social media and invitation to learn more and join
    - Whatsapp
    - Linkedin

- Contact details: is it fine to put them? Create new email addresses? Pictures?

    - Diego Müller: diego.mueller05@gmail.com, 017681202202, Compute Verification Lead
    - Begüm Balat: balatbegum@gmail.com, 0170 2077404, Governance Lead

Page structure

/professionals

Nav bar

Top level nav: same as on MAIS LP

Second-level nav specific to the professionals page:

- Logo: Link back to main site
- About
- Events
- Coworking
- Get involved
- Join (button → WhatsApp)

Hero

- Headline, e.g. "Not a student? Join our meetups"
- Subline: for people working in or around AI, researchers and anyone curious
- CTA: Join our WhatsApp group

Who it's for

- Professionals in tech and AI
- Researchers
- People exploring a move into AI safety
- Curious newcomers

What we do

- Meetups and socials
- Talks and discussion rounds
- Coworking days
- Virtual mixers

Events

- Luma calendar embed

Coworking

- When and where people cowork

- How to join

Get involved

- Find collaborators or people to think out loud with (the "Connecting people" idea from the current site)
- Give a talk
- Help organize

Getting into the field

- Short pointers for career changers
- Link to /resources

Contact

- Email
- Socials

Footer (professionals)

- Contact and socials
- Link back to main site
- Impressum, Privacy policy

Meeting Notes

30 Sept 2026

1. Goal of the site:
   What this is about, why we exist, and who it is for,
   What's the one thing visitors should do? Joining the WhatsApp group.

   The student page needs:
   a. WA Link
   b. Calendar embed
   c. Reading list specific to compute verification
   d. Probably room for more specific documents to come
   e. Link socials
   f. Contacts

2. Group name and domain
   a. student.munichaisafety.org
   b. munichaisafety.org/student <- this one

3. Structure
   Landingpage (MAIS) -> CTA: WA
   a. Students (resources, contacts, calendar)
   b. Not a student? Come to our meetups!
      mais/professionals

4. Building and hosting
   - Lives on GitHub: Share repo and access
   - Domain at GoDaddy (check and link access)

5. Legal stuff
   a. Feedback from Begüm: when they did Women in AI safety, they had to ask for permission from TUM
   b. Ask TUM what we need to mention from their side on the website
   c. Figure out if we need a privacy policy

6. Process:
   a. Layout for student page (shouldn't be too complex)
      i. Who we are section
      ii. Calendar
      iii. Links to socials

      -> Interface examples and then fill in the sections

b. Decide on logo and design direction
c. First draft
d. Share draft for feedback

First drafts by Diego

Who we are and what we do

Munich AI Safety Student Initiative

Advanced AI is arriving fast. The tools to govern it are not. *Or* Let's make AI go well

We unite students, academics, and experts to learn and work on the most pressing risks posed by advanced artificial intelligence.

Compute Verification

Industry leaders and experts are calling on governments to slow down the development of frontier AI, but the technology needed to do so doesn't exist. We are here to build it.

For any International agreement on AI to work, countries need to be able to check that others are keeping it. Verification mechanisms that account and evaluate the use of AI compute in a privacy preserving manner can make such an agreement possible.

Through a structured introduction to compute verification and a regular reading group, we will learn about these mechanisms and identify where further work is needed so we can conduct research projects and contribute to it ourselves.

Notes:

- Too much text?

AI Governance

Below is Begüm's text from the onboarding doc: AI Safety Munich Student Club - Google Docs

For the governance side our current focus is on raising awareness and gathering interest. We aim to create transparency, when it comes to regulatory guidelines for AI development as well as inconsistencies we mark as dangerous in AI reporting.

We currently plan to hold reading groups during the Winter Semester every 2 weeks starting in October, where relevant topics are curated by club leads and members.

We have also planned 2 workshops with AI Safety organizations and startups. Our team's internal project will be to build a reporting database, where we will compare different third party research publications on AI Safety incidents, aiming to gather complete data on the matter.

Inspo and potential networking

- https://tum-socialaiclub.de/projects
  Student club at TUM and LMU to use AI ethically in projects that benefit the social good
  -> When we go and talk to students, we have to make sure to clarify why we are different, what our approach is and why they should join MAIS instead of any of the other AI clubs (they do look pretty cool so we need to make sure we do too!)

- https://caish.org/
  I really like the simplicity of this page. It looks beautiful, yet professional, and in a way very human (good storytelling IMO).

- This is the design agency that made a lot of the websites for the big guys in the game like BlueDot, RAND, Foresight,... They make truly beautiful websites, maybe we can get some inspiration from them.
